

Ornithological Observations

An electronic journal published by BirdLife South Africa and the Animal Demography Unit at the University of Cape Town

Ornithological Observations accepts papers containing faunistic information about birds. This includes descriptions of distribution, behaviour, breeding, foraging, food, movement, measurements, habitat and plumage. It will also consider for publication a variety of other interesting or relevant ornithological material: reports of projects and conferences, annotated checklists for a site or region, specialist bibliographies, and any other interesting or relevant material.

OLIVE THRUSH WITH MIDDLE CLAWS MISSING

Nigel Anderson

Corresponding author: nigelanderson28@gmail.com

On 5 August 2011 an Olive Thrush *Turdus olivaceus* stunned itself by flying into a window on our premises. The bird was ringed but I did not want to stress it more after the "accident" it had, therefore I did not read the number on the ring.

What I found interesting was that the claws on both middle toes were missing but all the other claws were present and in good condition. Is this a common occurrence in Olive Thrush? Is it the result of their feeding behaviour or other forms of behaviour?
